

## Toyota Forklift Part

Toyota Forklift Part - In the United States, Toyota Materials Handling inc., or TMHU, has been the top selling lift truck supplier since 1992. Proudly celebrating more than 40 years of performance, the Irvine, California established business provides an extensive line of quality lift trucks. Thanks to their status of superiority, reliability, and durability, Toyota remains popular in this competitive market. Quality is the foundation of Toyota's legendary Toyota Production System practiced at all manufacturing facilities, including TIEM, which is stands for Toyota Industrial Equipment Manufacturing, located in Columbus, Indiana. The bulk of the Toyota lift trucks sold in the U.S. are built here.

All Toyota machinery and components designed within North America adhere to the International Organization for Standardization or ISO 14001 standard. TIEM has been honored many times for its commitment to continual progress, and its environmental systems. It is the first and only manufacturer to offer EPA and CARB-certified Compressed Natural Gas powered lift trucks on the market. For example, the Toyota 8-Series IC lift trucks emit 70% less smog forming emissions than the current centralized EPA standards and have complied with California's strict emission standards and regulations.

### TMHU, U.S.A. - Leading the Industry

Brett Wood, President of TMHU, links Toyota's success to its strong dedication to fabricating the best quality lift vehicles while delivering the utmost customer service and support. "We must be able to learn and predict the needs of our customers," said Brett Wood. "As a leader, our success also depends on our ability to address our customers' operational, safety and environmental cost issues." TMHU's parent company, Toyota Industries Corporation, also referred to as TICO, is listed in Fortune Magazine as the world's largest lift truck provider and is amongst the magazines impressive World's Most Admired Companies.

### Redefining Environmental Responsibility

Toyota Industries Corporation, as the parent company, has instilled a rich company doctrine of environmental stewardship in Toyota. Not a lot of other companies and no other lift truck manufacturer can meet Toyota's history of protecting the environment while concurrently encouraging the economy. Environmental accountability is a key characteristic of company decision making at Toyota and they are proud to be the first and only producer to provide UL-listed, EPA - and CARB -certified Compressed Natural Gas powered lift vehicles. Yet an added reason they remain a leader within the industry.

Toyota originally launched the 8-Series line of lift vehicles in 2006, again exhibiting its leadership and innovation in the industry. Featuring an exclusive emission system that eclipsed both Federal EPA emission values, and California's more environmentally friendly emission standards. The end invention is a lift vehicle that creates 70 percent less smog forming emissions than the current Federal standards allow.

Moreover in 2006, Toyota developed an affiliation with the Arbor Day Foundation, furthering their responsibility to the environment. Upwards of 57,000 trees have been planted in community parks and national forests damaged by natural causes such as fires, as a product of this relationship. 10,500 seedlings have also been spread through Toyota Industrial Equipment's system of dealers to non-profit organizations and local customers to help sustain communities all over the United States

Toyota's lift vehicles provide superior productivity, visibility, ergonomics and durability, and most importantly, the industry's leading safety technology. The company's System of Active Stability, often known as "SAS", helps decrease the chance of mishaps and accidental injuries, and increasing productivity levels while minimizing the likelihood of product and equipment breakage.

System Active Stability is able to perceive conditions that may lead to lateral unsteadiness and likely lateral overturn. When any of these factors have been detected, the SAS will immediately engage the Swing Lock Cylinder to re-stabilize the rear axle. This transitions the lift truck's stability trajectory from triangular in shape to rectangular, providing a major increase in stability which substantially reduces the probability of a mishap from a lateral overturn. The Active Mast Function Controller or the Active Control Rear Stabilizer also assists to avoid injuries or accidents while adding durability.

The SAS systems were initially adopted on the 7-Series internal combustion lift trucks which were put on the market in 1999. These systems helped propel Toyota into the lead for industry safety standards. Now, SAS is adopted on nearly every modern internal combustion models and is standard equipment for the new 8-Series. There are more than 100,000 SAS-equipped lift vehicles in operation, exceeding 450 million hours combined. The increased population of SAS-equipped vehicles in the field, along with mandatory operator training, overturn fatalities across all brands have decreased by 13.6% since 1999. Additionally, there has been an overall 35.5% fall in industry wide collisions, loss of control, falls and overturn from a lift vehicle for the same period.

Toyota's hardnosed standards reach far beyond the machinery itself. The company believes in offering general Operator Safety Training courses to help users meet and exceed OSHA standard 1910.178. Training services, video lessons and assorted materials, covering a wide scope of topics-from individual safety, to OSHA rules, to surface and load conditions, are accessible through the seller network.

Toyota has maintained a permanent presence in the United States ever since its first sale. In 2009, Toyota Industrial Equipment Manufacturing, produced its 350,000th lift vehicle. This reality is demonstrated by the statistic that 99% of Toyota lift trucks sold in America today are manufactured in the United States.

Situated in Columbus, Ind., the Toyota Industrial Equipment Mfg. campus equals 998,000 square feet of facilities spanning 126 acres. Facilities include a National Customer Center, as well as production operations and distribution centers for equipment and service parts, with the whole investment exceeding \$113 million dollars.

The contemporary NCC was built to serve TMHU buyers and dealers. The facility includes a 360-degree showroom, a presentation theater complete with stadium seating for 32, an section for live product demonstrations with seating capacity for 120; a presentation theater; Toyota's Hall of Fame showcasing Toyota's history since the birth of its originator, Sakichi Toyoda, in 1867, and finally a training center.

TMHU has 68 official industrial equipment dealers, along with 189 dealership locations throughout the United States, providing the most complete and inclusive consumer support and customer service in the industry. The company's new and Certified Used lift trucks, service, parts, and financing features make Toyota dealerships a one-stop shop to guarantee total client satisfaction.
