

## **Forklift Fork Positioner**

Forklift Fork Positioner - A fork positioner is actually a tool constructed out of high quality materials meant to withstand the most challenging procedures and work environments. This piece of equipment enables drivers to be able to control the forks hydraulically without leaving the seat. Side shifting units have the added ability to laterally position the arms or the entire load so as to facilitate more accurate lifting and position in a faster and more effective manner.

The fork pocket is quite unique and could enable the operator to securely sway the blades into position without any worry of damaging the positioning cylinders. This can allow the driver the alternative to be able to perform independent or simultaneous fork movement, depending on the job requirement. For most lift trucks with non-OEM carriages, complete carriages are considered necessary. Standard OEM carriages could be converted into fork positioners on available units.
